Does your company know who accesses each piece of data, from which device and why?

We build information security from the inside out: from the data at the core to every access, every device and company-wide rules.

THE LANDSCAPE

Protecting the perimeter alone is not enough

Firewalls guard the edge, but the real risk lies in ownerless access, outdated devices and policies no one follows. When an incident hits, there is no evidence of what happened.

R$ 7.19M

is the average cost of a data breach in Brazil, up 6.5% in one year. Phishing is the most common entry point.

FROM THE INSIDE OUT →

LAYERS OF PROTECTION

We protect from the inside out

Security starts with the data and expands, layer by layer, to the company's people and rules. If one layer fails, the one inside keeps protecting.

1. **Data**
   Classification, encryption and masking at the source, with a record of who used each piece of information.
2. **Identity and access**
   MFA, least privilege and access reviews: everyone sees only what they need.
3. **Devices**
   Endpoints inventoried, patched and monitored, in the office or at home.
4. **Applications and channels**
   Carrier-level anti-fraud, SIM Swap, 2FA + RCS and secure customer communication.
5. **Governance and people**
   LGPD-aligned policies, training and an incident response plan.

Continuous monitoring and forensic analysis run across every layer.

HOW WE CAN HELP

- **Governance and policies**
  Assessment, security plan and policies aligned with LGPD (Brazil's data protection law).
- **Protected endpoints**
  Devices inventoried, updated and monitored.
- **Forensic analysis**
  Investigation, evidence preservation and response.
- **Identity and access**
  Each person accesses only what their role requires.
- **Carrier-level anti-fraud**
  SIM Swap, Silent Verification, 2FA + RCS and KYC.
- **Assisted transition**
  We run your infrastructure and processes during the change.

SAFE .DAMCH

Security that starts with your data: whoever masters data at the source protects the operation without slowing the business.
